**Option****Complaint****Cause****Production**

Display shows "Coolant level low" despite the coolant level being correct.
Defect of sensor or coolant surge tank.
Improved parts have been introduced in production as of the above listed VINs.

## Remedy

In case of customer complaint the following checks have to be carried out.

1. If the magnet float in coolant surge tank is in the same position as the coolant fluid the coolant level sensor (partno.: 13276326 / catalogueno.: 13 04 006) has to be replaced.
2. If the magnet float in coolant surge tank is submerged, the coolant surge tank (part-no.: 13360063 / catalogue-no.: 13 04 014) has to be replaced.

**Note:**

This information is only valid where a correct coolant level is observed.

Change index: Corrected wording, corrected complaint description.
